EDUCATION

Vellore Institute of Technology, Bhopal

Bachelor of Technology in Computer Science and Engineering

2023 – 2027

CGPA: 8.30/10.0

EXPERIENCE

Summer Intern, Ordnance Clothing Factory (OCF), Shahjahanpur

May 2026 – July 2026

Ministry of Defence Summer Internship Program

Shahjahanpur, India

- Built a full-stack clinic portal (FastAPI, React, PostgreSQL) unifying patients, doctors, and factory admins on one platform, enabling direct patient enrollment and access to on-site healthcare.
- Designed a relational database schema and implemented role-based access-control (RBAC) logic to enforce strict multi-tenant data isolation between patient, doctor, and admin roles.
- Built an AI-powered summary feature that auto-generates structured patient summaries in one click, reducing doctors' time spent reviewing records by 60%.
- Implemented a RAG pipeline (ChromaDB + Llama 3.3 70B via Groq) for natural-language Q&A over patient records with privacy-isolated retrieval.
- Wrote unit tests for critical API endpoints and shipped through code review with senior engineers, directly improving reliability of the deployed, production-facing portal.

PROJECTS

PhD Supervisor Deep Research Agent (Team Lead) [GitHub] | TensorFlow, DistilBERT, NLP Apr 2026 – May 2026

- Led a team to design and build a research agent that screens 100+ universities in 4 minutes, cutting a 3–4 day manual process down to minutes.
- Defined the three-agent pipeline architecture (scraping, ranking, summarization) and coordinated integration across teammates working on separate components.
- Oversaw a FastAPI backend enabling real-time token streaming during background scraping, improving perceived responsiveness for users.

Omnitrix AI [GitHub] | React, FastAPI, Scikit-learn, Gemini API

June 2026 – July 2026

- Contributed to a hackathon team building an AI-powered customer intelligence platform that predicts purchase intent and recommends next-best marketing actions in place of generic campaigns.
- Trained a Random Forest model (93% accuracy) on customer behavior signals (cart activity, engagement, purchase history) to identify high-intent customers for targeted outreach.
- Integrated the Gemini API to auto-generate personalized campaign content (subject lines, messaging, CTAs), reducing manual work for marketing teams.

Inventra – Multi-Tenant Inventory Tracker [GitHub] | Django, DRF, PostgreSQL, JWT

July 2026

- Built a multi-tenant inventory management backend in Django, enforcing hard tenant isolation through scoped ORM queries and role-based access control for secure, non-negotiable data separation.
- Designed a normalized PostgreSQL schema for warehouses, assets, and stock movements; optimized priority-based asset retrieval with heap-based algorithms and query indexing to cut lookup latency on large datasets.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL

Backend & Frontend: Django, Django REST Framework, FastAPI, React, REST API Design, Object-Oriented Programming

Databases: PostgreSQL, MongoDB, Relational Database Design & Optimization

Core CS: Data Structures & Algorithms, System Design Fundamentals

Cloud & DevOps: AWS, Docker, Git, CI/CD Basics

AI-Augmented Engineering: Claude Code, Codex, LLMs, RAG, LangChain/LangGraph, Gemini API

Practices: Agile/Scrum, Jira, Confluence

ACHIEVEMENTS

Selected for OCF Shahjahanpur Summer Internship Program 2026 | Led a 3-agent research pipeline team for PhD Supervisor Research Agent | Google IT Support Professional Certificate | Solved 150+ algorithmic problems on LeetCode
