EDUCATION

Vellore Institute of Technology, Bhopal

Bachelor of Technology in Computer Science and Engineering

2023 – 2027

CGPA: 8.55/10.0

EXPERIENCE

Summer Intern, Ordnance Clothing Factory (OCF), Shahjahanpur

May 2026 – Jul 2026

Ministry of Defence Summer Internship Program

Shahjahanpur, India

- Selected among undergraduate applicants for a Ministry of Defence-sponsored internship; owned the design and implementation of production-oriented software pipelines for automated visual inspection.
- Built modular, testable Python services for data preprocessing, feature extraction, and inference, focused on performance and maintainability, iterating through code review cycles with production engineers.

PROJECTS

Multi-Tenant Task & Ticket Management API [GitHub] | *Django, DRF, PostgreSQL, Docker*

Jul 2026

- Owned the end-to-end design and build of a multi-tenant REST API, taking it from schema design through deployment, for teams to manage organizations, projects, and tasks with strict data isolation.
- Enforced hard tenant-level data isolation at the queryset layer alongside JWT authentication and role-based access control (Admin/Member/Viewer), preventing cross-tenant data leakage by construction.
- Designed normalized relational schemas with indexed foreign keys and optimized queries (select_related/prefetch_related) to keep response times low as data volume across tenants grows.
- Wrote pytest-django test suites covering tenant isolation, auth flows, and permissions, then automated them via GitHub Actions CI/CD and containerized the service with Docker for reproducible deployment.

OmniCX AI – Customer Intelligence Platform (Team Lead) [GitHub] | *Python, FastAPI, React*

2026

- Led a 3-person team to build an end-to-end AI-powered marketing platform for the Epsilon TeXpedition Hackathon 2026, owning architecture decisions and delivery across the ML, backend, and frontend layers.
- Trained a Random Forest classifier (93% accuracy/F1) on customer behavior signals (cart activity, engagement, purchase history) to predict purchase intent and surface next-best-action recommendations.
- Built a FastAPI backend that integrates the Google Gemini API to auto-generate personalized marketing copy (subject lines, messages, CTAs) from a customer's predicted intent.
- Built a React + Tailwind CSS analytics dashboard to surface predictions, recommendations, and generated campaigns to business users in a single view.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, SQL

Backend, APIs & Frontend: Django, Django REST Framework, FastAPI, React.js, REST API design, Object-Oriented Programming, Relational Database Design (PostgreSQL)

Data Structures & Algorithms: 350+ problems solved on LeetCode; strong fundamentals in trees, graphs, dynamic programming, and system-level problem solving

Systems & DevOps: Apache Kafka, Docker, Streaming Pipelines, CI/CD (GitHub Actions), Distributed & Real-Time Systems

Tools: Git, GitHub Actions, Streamlit, pytest

ACHIEVEMENTS

- Selected for OCF Shahjahanpur Summer Internship Program 2026, a Ministry of Defence-sponsored software engineering internship.
- Solved 350+ algorithmic problems on LeetCode; maintain an active [DSA repository](#) covering trees, graphs, and dynamic programming.
- IBM AI Engineer Professional Certificate | NPTEL Introduction to Machine Learning.

ADDITIONAL

Languages: Fluent in Hindi, English, and Urdu

Interests: Competitive Programming, Open Source Contributions, Badminton, Football
